Abstract

This paper presents regional systems performance analysis and regional management practice. The region is considered as a territorial formation resulting in research of the regional management itself including its subject, scope and purposes, management system principles, structure and functions, control methods and etc. that break a new ground for the development of a special territorial approach to solving the regional strategic management problems which basic concepts and essentials amend and expand the provisions of existing approaches. The provisions related to the description and explanation of the region development processes are in progress building up the effective critical tasks solution prerequisites of the regional society organization. © IDOSI Publications, 2013.
